

Sales Forecasting

Student portfolio project

Create a transparent baseline forecast from historical monthly sales and trend signals.

project_id: sales_forecasting | template_id: sales_performance | source_rows: 48 | prepared_rows: 48 | generated_at: 2026-08-11T06:45:05.750086+00:00

Executive summary

Sales Forecasting analyzed 48 rows across 4 fields. The reusable sales_performance BI template presents source-backed KPIs, drivers, and detail tables. Total sales is \$2.2M with a transparent synthetic validation fixture or uploaded source.

Detail by region

region	count	sum	mean
East	12	543556.42	45296.36833333334
South	12	542475.07	45206.25583333333
West	12	542313.91	45192.825833333336
North	12	540656.01	45054.6675

Key findings

sales and forecast_baseline are strongly correlated ($r=0.902$).; date is nearly unique per row (100.0%).; forecast_baseline is nearly unique per row (100.0%).; sales is nearly unique per row (100.0%).

Caveats and assumptions

Fixtures are synthetic validation data. Uploaded datasets remain the source of truth; field aliases are recorded in the build metadata.
